Cara membuka password wifi dengan hp android

4Winmobile.com & e a,~ "How to break WiFi passwords without applications can be practiced to get Internet access. Because in digital age as now, the Internet has become one of the fundamental needs for the community. In this Case, to get a free internet connection and even quickly a way is to connect to the Wi-Fi network. But the average whose wifi name is safe to access you need to use a password, the owner of the network intentionally gives one Password for their wifi so that not everyone can enter their Internet. High speed internet with Wi-Fi is usually expensive, so not everyone can have this type of access. Although Internet access can be accessed It can facilitate all our activities. Like access to social media, watch YouTube, surf the internet to watch interesting movies. But unfortunately Internet access is stable and fast the price is also not ab Uon market, so it's just a handful of people who can have wifi at her home. But there are also Wi-Fi in public areas given security so that you can't access from everyone. Although it's good enough, if you can get free WiFi access. But how are you, if you don't know your password or password from wifi around us? So we can't use it to access the Internet. But there's no need to worry, because there are many ways to break passwords in wifi, without an application. The methods indicated can be used without the help of the application that must be installed, so it is not necessary to install an annoying application. Curious, they want to know how? Just look at the way in which below is quite easy to apply! How to break the Indihome WiFi password through the first IP address configuration is to break the wifi password without having to use the application is to use the IP Address configuration. This method is very simple to use in a network password using a modem router. Read also router: definition, function, types and as kerjanya!malnya such as indihome and network @ wifi.id that has internet access with a high-high speed. First of all, you need to activate Wi-Fi on a mobile phone or laptop, when your Wi-Fi can immediately see the hotspot (Access Point) that is active around you. The easiest way to find and wherever it's @ wifi.id, so the address is what is often divided into hackers and many people. If you choose @ wifi.id, then you need to connect to this address. Usually, after connecting, the pop-up window will appear asking you to enter the user name and password. And the Edit Network Configuration Mode page will appear at the same time. Here you can start operating the @ wifi.id IP address by changing the IP address. Usually written with 192.168.1.1 and here you can change to http //: 192.168.1.254 at the top of the address column (address). If you leave the login page, you don't need to worry, because this is what you expected. Then what you need to do is enter a username or user name and password or password. The way is to insert the word admin or user as a username and password. If the user name is the administrator, the PassWord is also an administrator, and vice versa. If you use the user name of the user, the password is also a user. Then type Settings section and search for WiFi to see the user name and password. There is the user name and password are actually used to enter @ wifi.id. That then connects to the device, and as soon as you use it. Break the WiFi password with CMD (command prompt) if you want to connect via Wi-Fi when using a desktop or laptop computer, you can use this method. That means cmd cmd Request. Read also the assembly of the computer is to activate Wi-Fi before finding the closer hotspot. Then press the Windows + R key to run a single page, CMD (required command). Then type the word cmd in capital letters and for small groups and press OK, and a typical black cmd page will appear. To directly type commands, type Netsh WLAN Show profile and press Enter. The names will appear on the Wi-Fi network connected to the laptop. Then insert the NetSH WLAN display profile name (network) = delete. In this case your friend is just a connection with the same name and even enter the password that is already known after having saved it. Now, this is where network information and passwords appear. You can find a password in & e a,~ ~ key contents'. Subsequently, you must find a connection with the same name and also enter a password that has been known before. How to break wifi passwords Without a network application and Internet menu access If you use a desktop or laptop computer, then this menu can be found in the control panel. To find the Control Panel menu. Search in the Start menu, or right-click on the wireless symbol in the signal shape. It is usually located in the lower right corner of the screen near the battery status, to open the Open Network and Sharing Center menu. When it opens from the control panel, search for the "Network and Internet" menu. Then please open the & e a,~ ~ "network and sharing center on the laptop to find out which network is connected. In a new window, you will see the Manage Wireless Network menu, where you will find a password for Wi-Fi connection that is connected to a laptop. All you have to do is click on the name of the network that the password wants you to see. After clicking, the new tab will appear with the Wi-Fi connection status you use. Click the wireless card and select the Security tab on the right. Inside, you will see Wi-Fi information such as the type of protection, type of encryption, and network security lock. The network security key is still a dashed line that cannot be read. And to show your original character just need to check the & e a,~ ~ "show characters& e a,~ ~ and show the Wi-Fi password in use. Finally there are many ways to break in Wi-Fi connection using the application or without using the application. But in the way this moment we only focus on how to break in wifi without having to use the application. This method is considered easier because it does not require the use of the application so that there is no need to install any application. Just practice the aforementioned way and look for free Wi-Fi, without having to know the password or password. Remember, take advantage of much above wisdom, so you can get quickly and free internet connection too. So ways to enter the wifi password without applications that can try to have free and fast internet access. Good luck and you see only in 4Winmobile.com. Time every barrier what kind or a Wi-Fi Connect connection, surely your device Save the name and password of WiFi to be assured and easily accessible for the future. The problem is when you really want to see the Wi-Fi password on a network network Average or were connected to you. Perhaps you want to connect to the second phone or want to share a wifi password on your friend's wifi, looking again on the wifi password that has been stored. But the problem is that you don't know how to see a wifi password on your cell phone. But there's no need to be worried, because there are several ways to overcome this. . If you use a mobile phone with Android 10 or higher, it's easy to see the Wi-Fi password directly from your cellular adjustment, but you use Android 9.0 cake or lower, so your mobile must be root law also:. Like Block Indihome WiFi FiberHome with Mac AddressCara Watch the WiFi Password on the first Android 10Metode Mobile does not require root or even additional applications. But this method requires your mobile to run Android 10 or higher. under. If at this point your mobile does not use the Android 10 operating system, then you can jump in a way that goes to method 2. At this time, there is only an Android 10 operating system, the version of the "Android" Android "Directly from Google. However, in the near future manufacturers like Samsung use Android 10 applying OEM leather as one user interface, which means that the settings menu can be a little different on your cell phone in advance. So before, Find Menu Your Mobile Settings in the "WiFi& e a,~ ~ submenu. On Android warehouse, you are in Settings ~ > Network and Internet. After finding the WiFi Settings menu, and select. One on the same Wi-Fi setup page, scroll through the list of available networks and select the & e a,~ ~ "Warningan option" Stored& e a,~ ~ "Dari there, you will see a list of all WiFi networks Saved your mobile. Choose one of the networks you want. Now, select the option & e a,~ ~ "shard at the top of the screen. You will be asked to scan fingerprints or face or insert yours HP PIN or password. After doing this, you will see a QR code with which it represents the SSID password and the network. You can repair with another mobile phone using a QR scanner if you want. But the password is also listed in the Usually under the QR code, so you can copy from there too. How to view WhatsApp messages are deleted with this application, if your mobile phone turns android 9.0 cake or bottom, the only way to see the wifi password Stored is with the root application READ ALSO: .. How to choose the best pure life insurance for your family will work best if you have installed TWRP and use it for the Magisk installation for Roota there are some applications that claim to be able to show the Wi-Fi password on the Play Store, but The only thing we found to the function on all our devices is wifi password viewer for simonedevasaat first run wifi password viewer, the application will require super-user access. Touch & e a,~ ~ "in permission & e a,~ ~, then you will be brought to a list containing all the WiFi networks you've ever connected, where every password entry shows below it. If you are connected to various WiFi networks, despite having your Android device, your list maybe it's quite long. If this is the problem, you can search for some WiFi networks using the search button at the top right. If you want to share one of these WiFi passwords with other devices, different options are available. First, touching all the entries in the list, then the small menu appears. From this, you can touch & e a,~ ~ "Salin password & e a,~ ~ to copy the network password to the clipboard. This will make it easier to stick to your favorite message application and send to another device. Alternatively, you can pass a step e & e a,~ ~ "shard, & e a,~ ~ then select your application preferred message from the menu that seems to send passwords as a network above or iPhone, you have just opened the camera application, choose the QR code, then touch the Popup prompt to automatically connect to the wifi network search search: how to view wifi passwords on your phone, the application sees the wifi password that has been connected, how to find out the wifi password on mobile phone, see the wifi password on mobile phone
